ABOUT US.

At Mesh Training Ltd., we deliver hands-on Virtual Reality workshops tailored for the creative sector, designed to elevate workflows and empower the next generation of designers. Specialising in Gravity Sketch and equipped with a fleet of Virtual Reality headsets, our certified trainers offer a hands on, immersive and high-quality learning experience for your team or class, on-site and at our hub in Nottingham.

Priten Chauhan
Director and Lead Trainer

COURSES FOR ALL ABILITIES.

The training was engaging, exciting and inclusive. Students came out of the sessions with a huge 'buzz' understanding Gravity Sketch and the tools it and how this links to careers and the wider world. The team's communication and organisation made running these training sessions a dream!

Cassie Blackwell - Careers lead at Wales High School

THE EDUCATION PLEDGE.

DRIVEN TO INSPIRE THE NEXT GENERATION

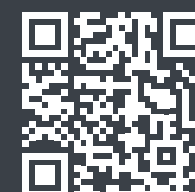

The UK's Design and Technology (D&T) education sector has seen a sharp decline in GCSE and A-Level entries, with a 67% drop in GCSE entrants between 2011 and 2023, due to curriculum changes, recruitment challenges, and funding cuts¹. This has limited students' opportunities to develop key skills in creativity, problem-solving, and technical design. As Product Designers who benefited from D&T education, we understand its critical role in shaping careers.

In support of the Design Council's 'Blueprint for Renewal,' We pledge to prioritise support for Design and Technology education in schools and colleges to help inspire the next generation of innovators and designers.

VR headsets are available to hire for all in-person sessions!

OUR OFFER

1 EXCLUSIVE DISCOUNTS*

All training whether bespoke or standardised comes with an education discount. Simply email the team at info@meshtraining.co.uk from your education email address to unlock your discount code.

2 SPECIALIST SUPPORT

Drawing from our industrial design experience in industry and academia, we're always on hand to support you with the highest quality, jargon-free information and resources you need to bring Virtual Reality into your department.

3 TEACHING RESOURCES

We can advise on creating context-based syllabus content, mixed method design challenges and provide teaching material such as presentation rooms and interactive learning experiences that are ready to be 'dragged and dropped' into your workspace.

*T&Cs apply. ¹Design Council, 2024

DESIGN BETTER, TOGETHER.

“

The team were instrumental in setting up and developing our Gravity Sketch program at Nottingham Trent University. They're perfectly placed between industry awareness and technical know-how to build efficient, design-focused and engaging sessions for our students and faculty. I strongly recommend their consulting and teaching services for Gravity Sketch and VR workflow implementation.

Liam Martin - Associate Lecturer,
Founder of Visune

”

“

The team are very welcoming in their approach to training. They were very good at helping our pupils to relax into using the headsets - this is especially important for those who have no prior experience of VR. They made the sessions fun, engaging and interesting without getting frustrated when people were struggling.

Katie Campbell - Head of D&T at Leicester
Grammar School

SOLUTIONS TAILORED TO YOU.

VR HARDWARE, SOFTWARE AND STORAGE SYSTEMS

- Securely house up to 30 VR headsets with our specialist storage systems.
- Each system includes built-in WiFi and charging capabilities, and a 3-year warranty on all internal components.
- All devices are configured, updated and ready to use with our plug & play service.
- Whether you're looking for your first headset or building a fleet, we're here to help.

Proudly supporting the next generation of designers at:

WHAT IS GRAVITY SKETCH?

Gravity Sketch is a 3D modelling and design software set in Virtual Reality that provides the resources for designers and creatives alike to create, present and collaborate on their ideas in an infinite and immersive workspace.

- Seamlessly import physical sketches and evolve them into digital 3D models ready to be exported into your favourite CAD software or 3D printing slicer.
- Creatively communicate a design process in an engaging 3D format using adjustable mannequins, 3D annotation and interactive presentations.
- Bring the studio environment with you wherever you are and collaboratively review your team's design in real-time.

STANDARDISED TRAINING.
